

Delivering the Connected Enterprise

Simplified delivery of centralized applications and information to virtually any device, user or location.

Simplified delivery of centralized applications and information to virtually any device, user or location.

ThinManager Delivers

ThinManager allows you to easily manage the configuration of end-user terminals and the delivery of all of your centralized applications and content to those terminals.

Ease of Use

ThinManager's wizard-based configuration allows administrators to easily set up advanced functionality for end-user devices such as PCs, thin clients and mobile devices. ThinManager also makes it easy to customize the content delivered to the terminal based on who is logged in and what role they play in your work environment.

A Complete Solution

ThinManager is the only platform that manages both the server side and the terminal side of modern computer networks offering full server failover and redundancy options to keep your resources in an "always on" state, reducing downtime and lowering your Total Cost of Ownership.

**One stop solution for industrial
products and services**

ThinManager®

(Content Delivery and Device Management Software)

- ThinManager is a Platform Agnostic works with any platform and helps in content delivery from any Industrial Automation System.
- It Enables Secured Content Delivery and Device Management.
- It is secured because it provides only the application link and secures all the background apps available in the server.
- It enables the relevant content to relevant user which is termed as user based content delivery.
- It also enables Device based content delivery that is only a specific content to a specific device
- ThinManager also provides location based content delivery which is termed as Relevance. Locations can be mapped using locations resolvers using GPS / Barcode / Wifi Access Points / Bluetooth beacons.

Why Customers Use ThinManager®

1 Ease of use

- No local configuration of thin client required
- Admin console and terminal to terminal shadowing
- Industrial thin clients & broad touch screen support
- Control thin client session inside application (ActiveX control)

2 Reduce Downtime

- Automatic Remote Desktop Server failover
- Redundant networking options at thin client
- Aggregate multiple content sources at 1 terminal

3 Improve Operational Efficiencies

- OT-Centric solution designed for the plant floor
- Visualize content with tiling & virtual screening
- IP/USB Camera integration
- Location-based mobility (Relevance®)

Configuration Wizards

Easily select the functionality you need without any coding

Quick Replacement

Most ThinManager® thin clients can be replaced by anyone in under 2 minutes without any loss of data

BOOST
Productivity

ThinManager provides a powerful set of tools that lets you focus on producing more with less downtime.

SMART
Mobility

Deliver the right content to the right person in the right place with ThinManager Relevance®.

EXTEND
Security

Unprecedented control and security in a sustainable and scalable platform.

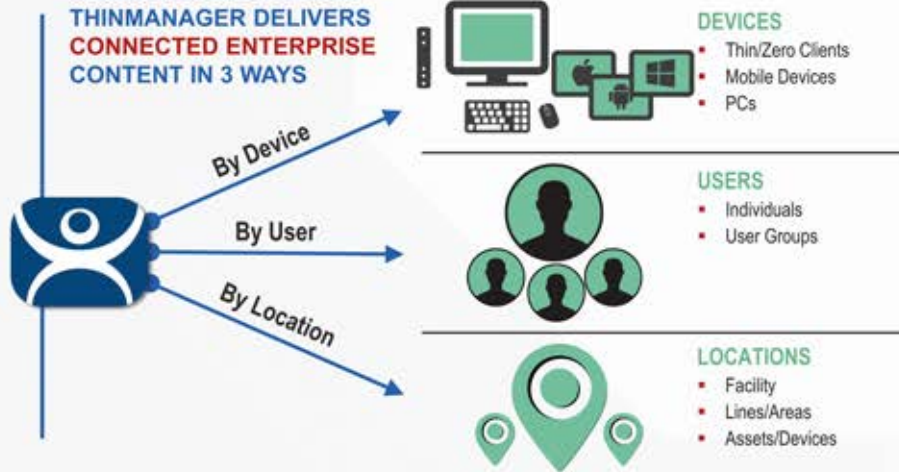

ENHANCE
Visualization

Centralized management of applications and visual sources, all from a single user interface.

ThinManager Securely Delivers Content

CONTENT TYPES

- Windows Based**
 - HMI
 - MES
 - CMMS
 - ERP
- VNC**
 - Web Content
 - IP/USB Cameras
 - Terminal Shadow
 - PanelView Plus

- It Enable Secured Content Delivery and Device Management.
- It is secured because it only provide only the application link and secures all the background apps available in the server
- It enables the relevant content to relevant user which is termed as user based content delivery.

User Based Content Delivery

User logs in using Relevance User services

- Relevance User credentials can reside within ThinManager or can be linked to an Active Directory account
- Once authenticated, additional content can be delivered to the terminal based on the user or the user's role
- A badge or fingerprint can be associated with the user to simplify the login process

Location Based Mobility

Relevance

- Mobile Devices are managed exactly the same way as thin clients in ThinManager.
- Each Location can be assigned content as well as a Location Resolver.
 - QR Codes
 - WiFi Access Points
 - Bluetooth Beacons
 - GPS
- Location content can be geo-fenced to physically limit where the content can be accessed.
- Example: QR Code on PLC panel is scanned by mobile device and an instance of Logix Designer is delivered to the tablet with the correct ACD file automatically opened.

ThinManager V-FLEX Licensing Overview

Users now have the ability to purchase single ThinManager connection licenses that have no network or location restrictions and provide for bulk purchase discounts.

Deliver ThinManager client connections with maximum flexibility on an as needed basis to any of your facilities around the world.

ThinManager V-FLEX licensing is a single ThinManager Xlr individual terminal connection license that can be purchased one at a time in any quantity.

They can be deployed over an unlimited number of ThinServer pairs (primary/backup) at an unlimited number of locations on multiple networks.

ADVANTAGES OF V-FLEX LICENSING:

- Central management of ThinManager client connections.
- Use across multiple facilities no limitations on the number of locations, networks and servers.
- Ability to purchase and add additional licenses only when and where they are needed with volume discount pricing.
- Access to a private ThinManager license server portal for creating and distributing licenses for use.
